Product Characteristics

Description

- exterior awning for conservatories, glass canopies and large skylights
- the ingenious tensioning system and the sturdy design allow areas of up to 36 m² to be shaded by one awning (with tracfix system 30 m²) – up to 5 awnings can be coupled together

Special features

- fully encompassing cassette that protects the cover perfectly
- the awning cover is bonded with stabilising vertical panel joints – in the case of the series sunvas, sunsilk, sunbow and perla FR the standard panel width is 60 cm (perfortex 120 cm / Soltis Perform 92 88,5 cm / transolair 84 cm) – in order to achieve the optimum overall cover tension and stability
- tracfix optional: the continuous lateral cover guidance system that leaves no gap between the cover and guide tracks – gives improved wind stability and a cleaner appearance
- option of a silentec motor – motor noise is appreciably reduced
- tried-and-tested tensioning system with drive belts and integrated gas pistons – delivers optimum cover tension – in any phase of extension
- the broad range of brackets with patented clip-on system offers individual fixture solutions

Dimensions

- single unit: 60–700 cm in width, maximum extension 700 cm (depending on the width)

Single unit 1 field, 1 motor

The technical drawings illustrate the dimensions and components of a window frame. The front view (left) shows a rectangular frame with a total width of M and a total height of H . The frame is divided into three vertical sections: a central section of width $MA = BA$ and two side sections of width $MB = 300$. The frame has a thickness of 60 and a height of 185 . The side view (right) shows the frame's profile with a total height of $H + DIF$, where DIF is the depth of the frame. The side view also shows the frame's thickness of 60 and the height of the frame's side panel, which is 150 . The side view includes a label $[26]$ indicating a specific component or material.
